

# FT FLAPWHEELS

**FINTECH** specially designs these flapwheels for our individual customer needs in the use of deburring and finishing. These are easy to use and offer a soft finish with absolutely no belt cuts left on your product! These wheels can be used on all types of metals where tight curves can be finished with ease.

Wheels are available in diameters from 8" to 16", in either X or J weight material. Different ply configurations are available, each affecting life and finish capabilities.

Remember, this wheel is very forgiving, and will leave a finer finish than a same grit belt: i.e. a 180 grit wheel will leave a finish equivalent to a 220 grit belt.

At **FINTECH** we pride ourselves in recommending the correct product to give you the correct finish!

These flapwheels are aggressive and best for stock removal such as casting lines or fabrication marks.

All **FINTECH** flapwheels must be used with flanges available separately.

# FLAPWHEELS

This all coated flap wheel works well on metals from stainless steel to aluminum with uses such as deburring, blending, and finishing contoured parts. These wheels also offer different flex backings to give you the ease of use with long life.

Flapwheels are available in 14" or 16" diameter from 5/8" to 4" in width.
