

STRIP IT DISC

This is an aggressive disc that allows you to remove surface coatings including rust, paint, adhesives, weld splatter, and other contaminants.

The openness between the nylon filaments reduces loading to enable a long lasting cut and a consistent finish.

Available with a heavy duty fiberglass hub to use with angle grinders for rapid surface removal.

NYLON FILAMENT ABRASIVE & WIRE WHEELS

Wire wheels are available in a variety of types including crimped, wire and twisted knot.

Nylon filament abrasive wheels are made from nylon filaments with abrasive grains impregnated throughout providing consistent performance for your deburring and edge blending needs.

Both wheels are used for cleaning and deburring, removal of rust, weld flash and heavy burrs. The smaller brushes allow you to reach tight areas and corners.

Wheels range from 2" to 15" diameters with varying widths to meet your specific needs.

Use a cup brush for a high impact and aggressive removal of product.

Smaller brushes also available mounted to use with hand tools.
