

UNITIZED WHEELS

These wheels are used for aggressive cutting, weld removal, blending and finishing while leaving a fine polished finish.

Available in soft, medium and hard densities in diameters of 1" to 6".

Remember, the harder the density the greater the cut taken by the wheel.

Holders available

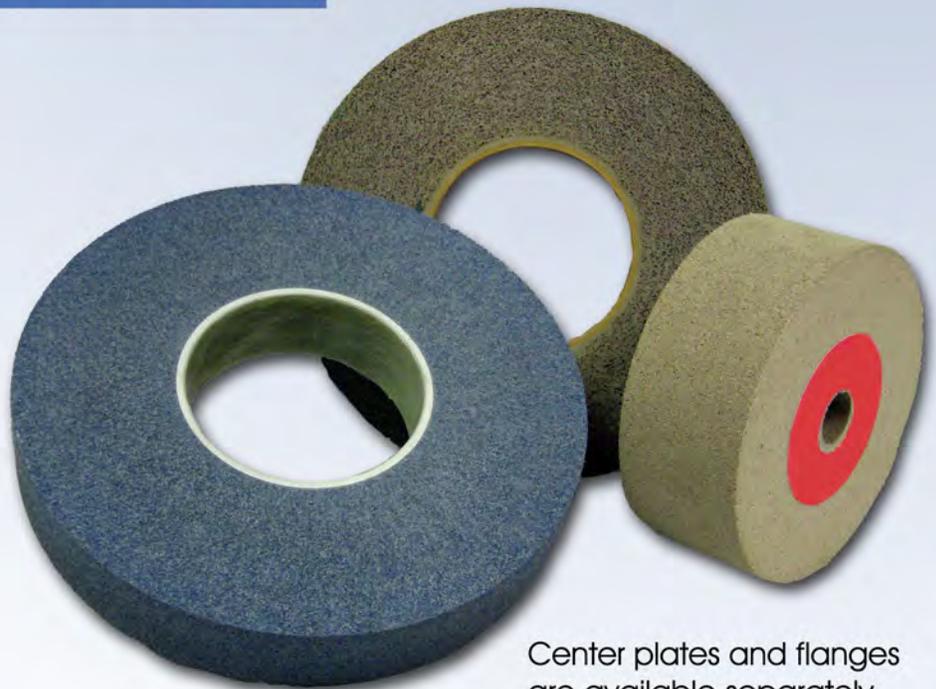

Mounted wheels

CONVOLUTE WHEELS

While similar to unitized wheels these convolute wheels are formed by wrapping the abrasive material around a resin core. This method offers a larger size varying from 6" to 14" in diameter in widths to meet your needs.

Available in soft, medium and hard densities

Used for deburring, blending and cleaning while leaving a fine polished finish.

Center plates and flanges are available separately to be used with convolute wheels.
